The PRECO Meter Drive Reverser made from high density polyethylene plastic is resistant to water condensation plus provides an excellent insulating barrier to static electricity. The Reverser made with the 6061-T6 Aluminum body has an anodized finish and is so rugged that it is almost bullet proof.

- Easy Installation
- Operates on very low torque
- Solves wiggler drive rotation issues
- Precision CNC Machined Parts
- Type 316 Stainless Steel Shafting for maximum corrosion resistance
- Oilite oil-filled Bearings
- Brass wiggler & Gearing for long life
- Two different housing materials (High Density Black Polyethylene or Anodized 6061 Aluminum)
- Mounts between meter and index or instrument
- Same size as Preco-Matic Switch

## PRECO Meter Drive Reverser

The PRECO Meter Drive Reverser allows the utility to continue to use meters that can not accommodate currently available indexes. This unit reverses the rotation from the wiggler output of gas meters. The unit is available with a black plastic or anodized aluminum body. The housing and components are precision machined with CNC machinery to close tolerances. This means that we will be able to deliver consistent quality to you. We believe this unit to be of superior quality and an economic solution to drive rotation issues.
